

## ONSITE PHOTO CHECKLIST

# PV Installers

Ensure all photos taken are geotagged & time stamped by enabling location services on your mobile device or by using the Bridgeselect app.

### Installer onsite selfies

\*Please ensure an appropriate amount of time is left between selfies, a minimum of 30 minutes between each is required

- Start selfie**  
Taken in front of property at letterbox or during toolbox meeting
- Middle selfie**  
During inverter setup/mounting, installation of panels or racking going down
- End selfie**  
During commissioning of inverter, completion of panel installations or system demonstration with homeowner.

\*This photo **date must align with the** date of completion/testing as listed on the **Electrical Certificate of Compliance**

### Panels

- All panel serial numbers**  
Photo be taken or scanned **directly from the panel**. Scans from pallet sheet are unacceptable and will prevent STCs from being claimed. To ensure SPV 24hr payment eligibility, scan and verify all panel serials onsite.
- One solar module plate**

### Inverter

- Inverter installed**  
A photo of mounted inverter
- Inverter label, clearly showing serial number**  
Photo to be taken or scanned **directly from unit**.

\***Microinverters** – a photo/scan must be obtained from **each** microinverter **directly from the unit**. Scans from panel layout diagram are unacceptable and will prevent STCs from being claimed.

### Property

- Property after install**  
A photo of all newly installed panels at the installation address taken prior to leaving site. Please attempt to include as many panels in frame as possible.
